

LocationForms

LocationAware App based Digital Form Platform
with Camera, Video, Audio, QR, Barcode capabilities

LocationForms DataSheet

www.locationforms.net

INTRODUCTION

On an average it costs an organisation about **358 Naira** or more to produce, process, and handle paper forms, this cost was arrived at if you consider, data entering, filling costs, employee time especially to re-enter collected data in reports or EPR/CRM software, stationery costs, real-estate costs(cabinets & other storage methods) and other indirect costs associated with filling paper forms. This cost even doubles if the data is to be collected remotely by a staff/field staff, in order to save organisation these costs related with filling paper forms both locally or remotely, it is imperative for organisations and businesses to deploy solutions that will enable them gain efficiency and save unnecessary costs for efficient and cost effective operations.

OVERVIEW

Collecting data using paper forms can be very cumbersome, time-consuming, inefficient, and the fact that paper forms can become obsolete within a short period, for example a bank Account package generally became almost obsolete when CBN introduced BVN and other KYC requirements. many a-times field workers in various organisations need to collect data from different remote areas, and after the data collection, they need to report to superiors, this process is time consuming and inefficient. instead of going the inefficient route of using Paper based forms, an organisation could simply do all data collection at once on the spot and data becomes available to who(superior reporting) or what(CRM or EPR software) requires it. LocationForms Enable users collect any kind of data through LocationForms android Application. And these information collected becomes available on a backend with excel download feature and map view of the responses.

KEY BENEFITS

- You can access Form data from field workers in real-time
- With the one Solution, you can customize it for various departments to easily increase the department's efficiency with little or no cost, see the use case section to see some of the immediate application to your organisation
- Reports from fields officers can be generated in real-time as the work is being done, hence no need to manually send these reports after collecting them from field
- Real-time access to field data needed for quicker decision making
- Enrollment process becomes about ten times faster (10X)
- Organization saves cost and efficiency increases when LocationForms.

KEY FEATURES

1. Location(GPS & Address) of the the place the form is being filled from is embedded with the response sent, hence you can know exactly where the form was filled from
2. You can Create custom fields like Camera, Video, Audio, QR code(this field will scan qr codes and sends the scanned data with the form response) Barcodes, GPS, regular form input types (checkbox, text, textarea, options, etc) and other special fields as your usecase may require
3. You can view all the response on a clustered Map
4. You can download the responses in excel
5. Platform is intuitive and very easy to use, both the Web end and the Mobile App
6. Specialized platforms can be developed for your specific use case or workflow.
7. Flexible and can be configured to work with your work/process flow
8. Responses can be piped to your email so you get the responses to your email in realtime
9. Responses can be piped to your server in realtime for further processing of response received
10. The form response is sent and received in real-time
11. Map Response can be made public for people to view
12. Hosted in PCI DSS certified environment

SOLUTION USE CASES

General use cases across various organisations
